

# Laboratory Reporting Reference

Updated April 2023

| Disease / Pathogen                                                            | Report to MOH (or Designate) | Report to CMOH (or Designate) |
|-------------------------------------------------------------------------------|------------------------------|-------------------------------|
| Adenovirus (RPP)                                                              | 48                           | 48                            |
| Aeromonas (Stool only)                                                        | 48                           | 48                            |
| Amoebiasis                                                                    | 48                           | 48                            |
| Anthrax ( <i>Bacillus anthracis</i> )                                         | FMP                          | 48                            |
| Arboviral Infections <sup>(1)</sup>                                           | 48                           | 48                            |
| <i>Bacillus cereus</i>                                                        | 48                           | 48                            |
| Botulism ( <i>Clostridium botulinum</i> )                                     | FMP                          | 48                            |
| Brucellosis                                                                   | 48                           | 48                            |
| <i>Candida auris</i>                                                          | 48                           | 48                            |
| Campylobacteriosis                                                            | 48                           | 48                            |
| Carbapenemase-Producing Organisms                                             | 48                           | 48                            |
| Cerebrospinal Fluid Isolates                                                  | N/A                          | 48                            |
| Chancroid                                                                     | 48 to STI Director           | 48                            |
| Chlamydia                                                                     | 48 to STI Director           | 48                            |
| Cholera (O1, O139)                                                            | FMP                          | 48                            |
| <i>Clostridium difficile</i> – Associated Infection                           | 48                           | 48                            |
| <i>Clostridium perfringens</i>                                                | 48                           | 48                            |
| Coronavirus, COVID-19                                                         | 48                           | 48                            |
| Coronavirus, MERS/SARS                                                        | FMP                          | FMP                           |
| Coronavirus, Novel                                                            | FMP                          | FMP                           |
| Coronavirus, Seasonal (RPP)                                                   | 48                           | 48                            |
| <i>Corynebacterium</i> ( <i>C. ulcerans</i> or <i>C. pseudotuberculosis</i> ) | N/A                          | 48                            |
| Creutzfeldt-Jakob disease (Includes 14-3-3 protein)                           | 48                           | 48                            |
| Cryptosporidiosis                                                             | 48                           | 48                            |
| Cyclosporiasis                                                                | 48                           | 48                            |
| Cytomegalovirus, Congenital                                                   | 48                           | 48                            |
| Dengue                                                                        | 48                           | 48                            |
| Diphtheria ( <i>Corynebacterium diphtheriae</i> )                             | FMP                          | 48                            |
| Echinococcosis (Alveolar)                                                     | 48                           | 48                            |
| <i>Escherichia coli</i> (Verotoxigenic)                                       | 48                           | 48                            |
| Enterovirus (including D68)                                                   | 48                           | 48                            |
| Flavivirus (Other)                                                            | 48                           | 48                            |
| Giardiasis                                                                    | 48                           | 48                            |
| Gonorrhea                                                                     | 48 to STI Director           | 48                            |
| <i>Haemophilus Influenzae</i> , Invasive (Non serotype b)                     | 48                           | 48                            |
| <i>Haemophilus Influenzae</i> , Invasive (Serotype b)                         | FMP                          | 48                            |
| Hantavirus                                                                    | 48                           | 48                            |
| Herpes Simplex, Neonatal                                                      | 48                           | 48                            |
| Hepatitis A                                                                   | FMP                          | 48                            |
| Hepatitis B                                                                   | 48                           | 48                            |
| Hepatitis C                                                                   | 48                           | 48                            |
| Hepatitis E                                                                   | 48                           | 48                            |
| Histoplasmosis                                                                | 48                           | 48                            |
| Human Immunodeficiency Virus                                                  | 48 to STI Director           | 48                            |
| Human Metapneumovirus (RPP)                                                   | 48                           | 48                            |
| Influenza, Avian; Influenza, Novel                                            | FMP                          | FMP                           |
| Influenza, Seasonal (mainly RPP)                                              | 48                           | 48                            |
| Legionellosis                                                                 | 48                           | 48                            |
| Leprosy                                                                       | 48                           | 48                            |

| Disease / Pathogen                                                                   | Report to MOH (or Designate) | Report to CMOH (or Designate) |
|--------------------------------------------------------------------------------------|------------------------------|-------------------------------|
| Listeriosis (Includes congenital)                                                    | 48                           | 48                            |
| Lyme Disease ( <i>Borrelia burgdorferi</i> , <i>B. afzelii</i> , <i>B. garinii</i> ) | 48                           | 48                            |
| Lymphogranuloma Venereum                                                             | 48 to STI Director           | 48                            |
| Malaria ( <i>Plasmodium spp.</i> )                                                   | 48                           | 48                            |
| Measles                                                                              | FMP                          | 48                            |
| Meningococcal Disease, Invasive                                                      | FMP                          | 48                            |
| Methicillin Resistant Staphylococcus Aureus (MRSA)                                   | N/A                          | 48                            |
| Monkeypox virus (MPOX)                                                               | FMP                          | FMP                           |
| Mumps                                                                                | 48                           | 48                            |
| Norovirus                                                                            | 48                           | 48                            |
| Parainfluenza (RPP)                                                                  | 48                           | 48                            |
| Paratyphoid Fever ( <i>Salmonella paratyphi</i> A, B or C)                           | FMP                          | 48                            |
| Pertussis                                                                            | 48                           | 48                            |
| Plague ( <i>Yersinia pestis</i> )                                                    | FMP                          | 48                            |
| Pneumococcal Disease, Invasive ( <i>Streptococcus pneumoniae</i> )                   | 48                           | 48                            |
